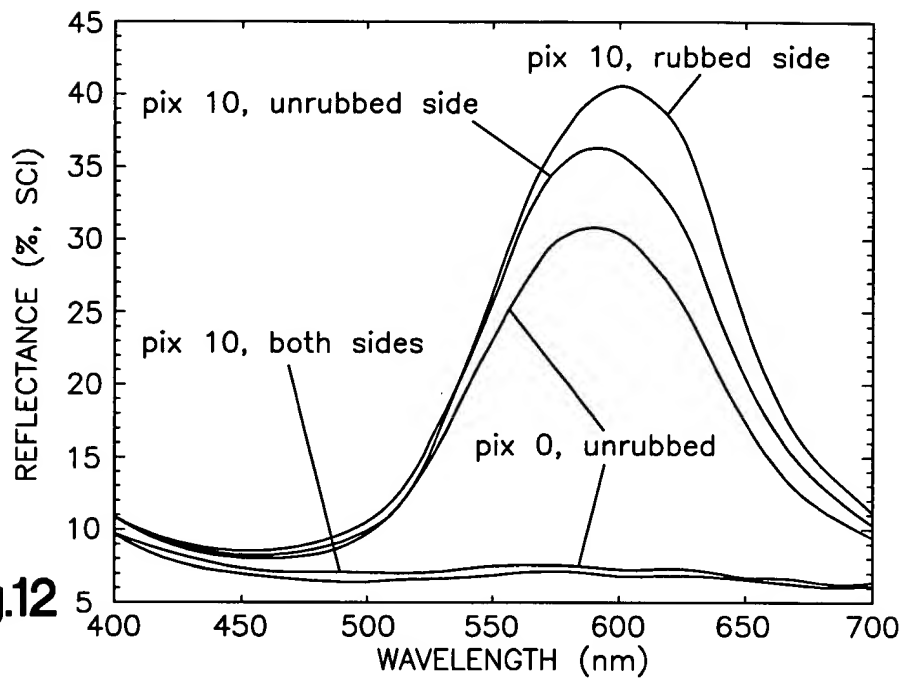

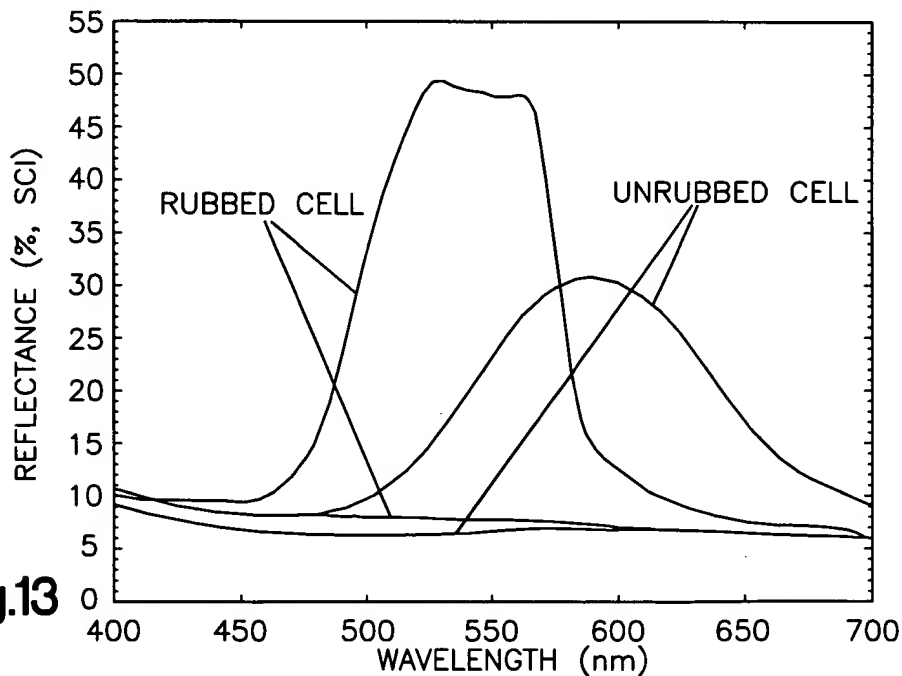

Fig.13

A high-contrast, black and white micrograph showing a dense, granular texture. The image is characterized by numerous small, irregular, light-colored spots or cells against a dark background, suggesting a cellular or crystalline structure. The overall appearance is highly textured and complex, with varying shades of gray and black creating a sense of depth and detail.

A high-contrast, black and white photograph of a rough, textured surface, possibly a rock or concrete. The surface is covered in numerous small, irregular pits and bumps, creating a complex pattern of light and shadow. A dark, elongated object, likely a pencil or pen, is placed horizontally across the upper left portion of the image to provide a sense of scale. The object is dark and appears to be resting on the surface. The overall image has a grainy, high-contrast quality, typical of a photocopy or a high-contrast photograph.
